

FOR IMMEDIATE RELEASE:

StrikeForce Licenses Its Keystroke Encryption Technology to Leading Security Company

Trend Micro adds GuardedID's encryption protection to its Trend Micro™ Internet Security Pro & VirusBuster™ Product Suites

Edison, NJ (October 27th, 2009) – StrikeForce Technologies, Inc. (SFOR.OB), a company that specializes in the prevention of Identity Theft, today announced that leading Internet content security provider, Trend Micro, has licensed its GuardedID® keystroke encryption technology. Trend Micro has added GuardedID's new "Standard" version to its Trend Micro Internet Security Pro and VirusBuster 2010 product suites as part of an ongoing strategy to provide users with the most comprehensive security offerings available.

"We are very excited about Trend Micro licensing our GuardedID keystroke encryption technology," says Mark L. Kay, CEO of StrikeForce Technologies, Inc. "Trend Micro is considered one of the world's leading Internet content security providers. Trend Micro will be offering our new browser-based keystroke encryption tool through their Trend Micro free tool center, which will benefit millions of users worldwide," says Mr. Kay.

"We chose GuardedID because its keystroke encryption technology is the most powerful tool available for protecting the customer's personal information," says Mr. Takeshi Yoshida, Senior Director, Global Consumer CBU and Japan Consumer Marketing. "GuardedID can encrypt and protect in real-time, not only single byte character password fields but also double byte character fields for addresses, names, and more. This is significant because we can now offer GuardedID's advanced browser encryption protection throughout the Asian region, and beyond." says Mr. Yoshida.

Additionally, Trend Micro customers will be offered a special "Premium" version of GuardedID, which extends the browser based encryption coverage to include Microsoft Windows desktop applications, i.e. Microsoft Office Suite, financial applications, email applications, Instant Messenger Programs, VPN clients, etc.

"Our new "Premium" version is the world's most advanced real-time keystroke encryption technology for the protection of personal and corporate information," says Mr. Kay.
